Recommended Adhesives	Divergent TimberRigid AF: Premium Urethane Divergent TimberTight AF: Premium Urethane, 100% RH barrier, sound control

**Follow NWFA Standards**

As a general rule for solid and engineered wood flooring, with geographic exceptions, appropriate temperature and humidity conditions are defined as those conditions where the interior environment is controlled to stay within a relative humidity range between 30% and 50% and a temperature range between 60-80 degrees Fahrenheit. These ranges are likely to be the average of all types of wood products used in normal environments assuming common heating and cooling equipment is used to ensure human comfort
